

All VRS equipment should be compatible. As a user of the d-link service I have found it is hard to contact users of Sorrenson equipment as IP addresses are continually changing so I have to text message friends and get current IP addresses before placing calls to them. Then friends with Sorrenson can not call my d-link as there is a block that I cant open up for them to call me. Unfortunately I can hear so I dont qualify for a free Sorrenson and I cant buy a Sorrenson either as it is not available to me. This whole dilemma could be elimanated by opening up the channels between all the equipment. I think this is marvelous technology but the kinks need to be worked out so there is equal access to all.
